## What's Magento 2 Category Import Export?

Import Export Categories with Magento 2 Category Import Export extension by Magenuts IT Solutions Pvt. Ltd. This extension will import/export Category, Sub Category, and assign products. Customers can also import/export any category-related data like Meta description, category image, page layout, and page layout. Customers can also create/update multiple categories with CSV files.

### Feature

1. Import/Export all categories and related data.
2. Update and Insert Categories in the Magento.
3. You can delete the Categories.
4. Export category data including Product SKU(s).
5. Support multi-store and multi-website.
6. Import/Export category images.
7. Supported Magento Community **2.0, 2.1, 2.2, 2.3, 2.4.3**

## Important Notes and Requirements

1. Requirements: **Magento Community 2.1.x up-to 2.4.3, Magento Enterprises (2.1.x to latest).**
2. Server Side Requirements: *MySQL 5.0 and above PHP 7.1.6 and above.*
3. All functionality is fully tested on Magento Community Edition 2.2.2 and will be compatible with Editions from 2.1.x up to 2.4.3.
4. **Magento Enterprises Edition is also supported but not tested.**
5. **For your safety related to any damage or loss to your store, it's strongly recommended to you that take a backup first.**

## Installation

1. Unpack the extension ZIP file on your computer.
2. Connect to your website source folder with FTP/SFTP/SSH client and **upload all** the files and folders from the extension package to the corresponding **root folder** of your Magento 2. x installation:

Please use the “**Merge**” upload mode. Do not replace the whole folders, but merge them. This way your FTP/SFTP client will only add new files. This mode is used by default by most FTP/SFTP clients software. For macOS, it's recommended to use Transmit. If you install several extensions from Amasty, they will contain the same files from the Base package — feel free to overwrite them, these are system files used by all our extensions.

3. Connect to your Magento directory with SSH.
4. Run the following 3 commands:
  - a. `php bin/magento setup:upgrade`
  - b. `php bin/magento setup:static-content:deploy`
  - c. `php bin/magento setup:di:compile`

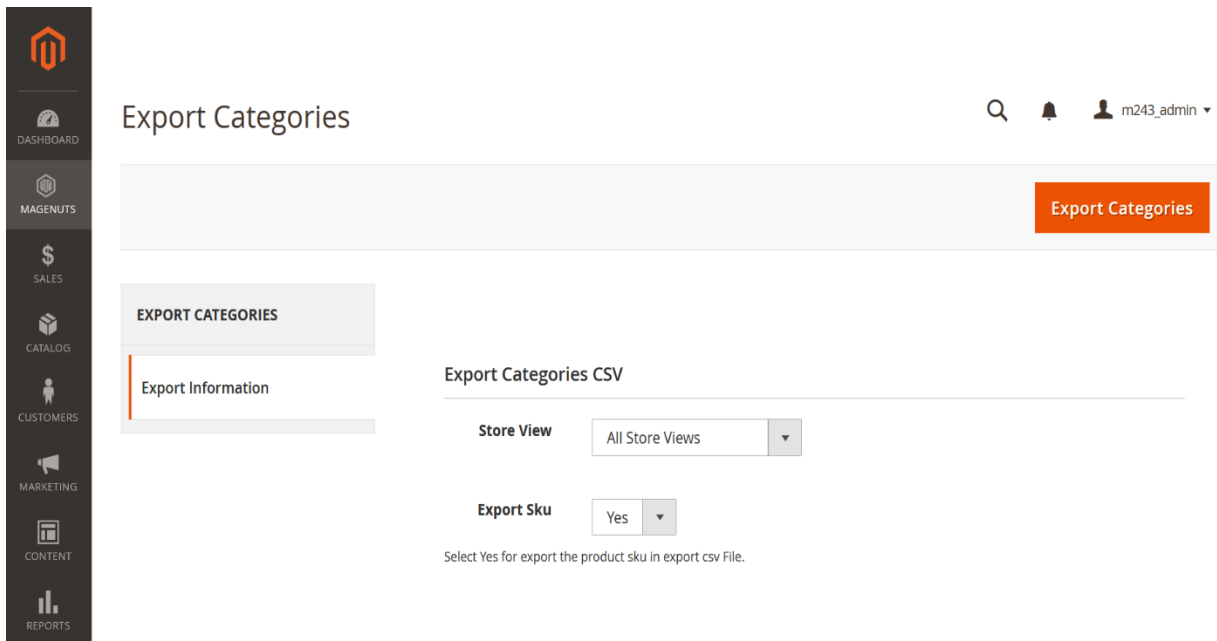

## Export Categories

You can export categories from any existing Magento 2 website by clicking Magenuts Extensions > Export Categories.

After clicking on it you will land a page as seen in the following picture.

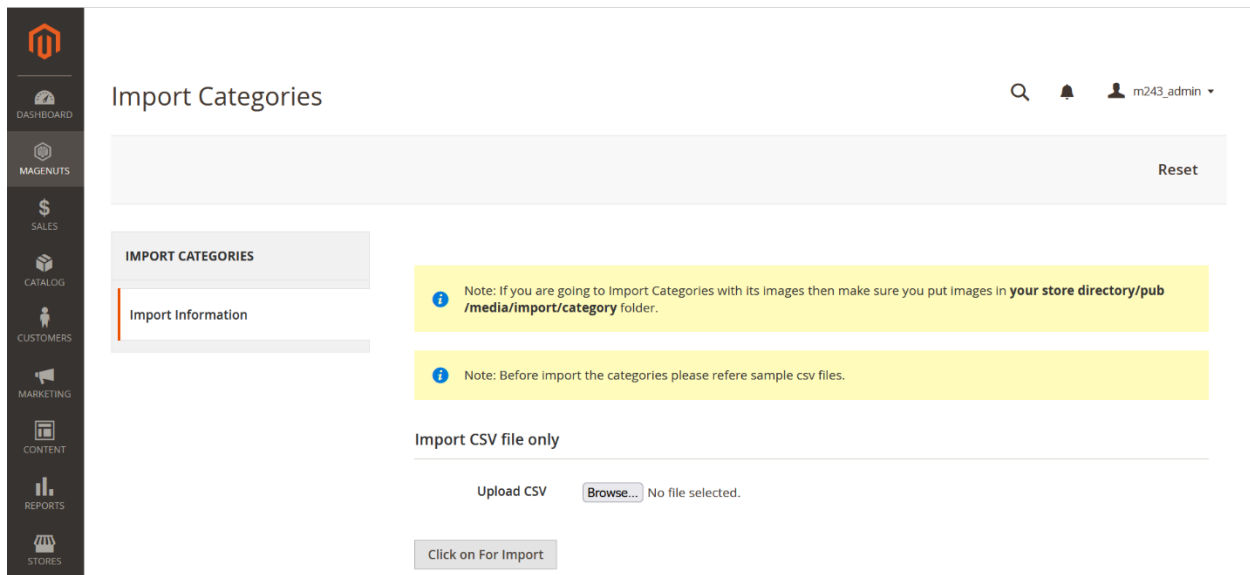

## Import Categories

You can export categories from any existing Magento 2 website by clicking Magenuts Extensions > Import Categories.
